

# ExitSentry™

## What They Can't See...

## ...Will Stop Them in Their Tracks

They can't see it, but a highly intelligent, reliable video surveillance system is guarding this airport exit lane.

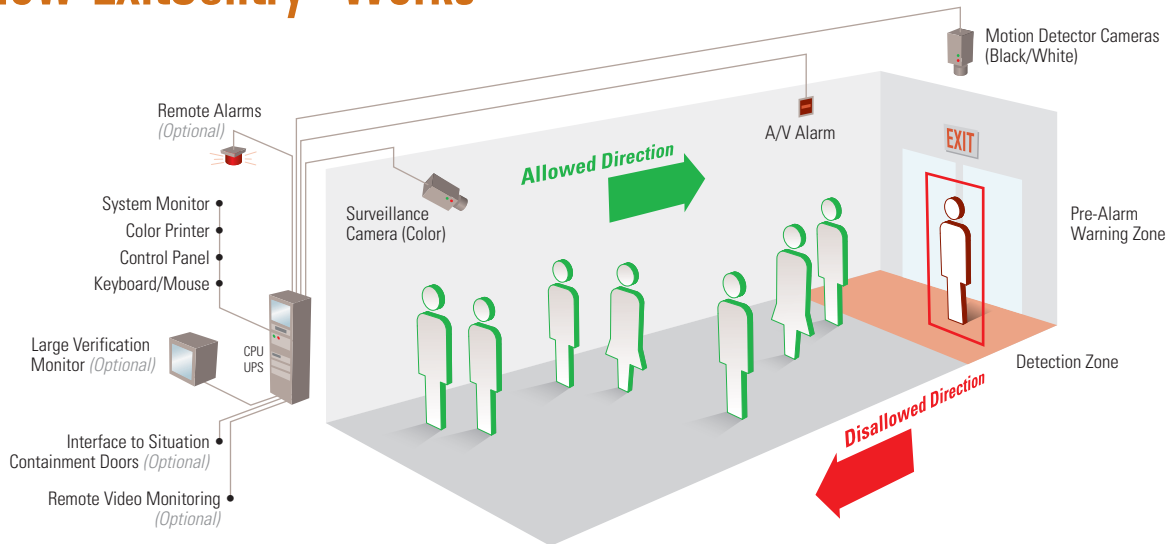

ExitSentry replaces the mandated around-the-clock guard in airport exit lanes with a technology that never blinks, can't be distracted and never makes a mistake. It maximizes security in the airline's concourse area by catching anyone trying to enter through the exit lane in an effort to avoid security checkpoints. ExitSentry identifies and immediately alerts security personnel of any wrong-way motion through audible and visual alarms. It digitally records the event and instantly plays it back, easily identifying the intruder. Color photos of the intruder are printed for quick and accurate reference in apprehension.

FAA and TSA approved, ExitSentry has over a million hours of proven operating performance at airports nationwide. And the payback period can be as short as six months.

Call **877-968-5454** or visit us on the web  
at [www.cernium.com](http://www.cernium.com) for more details  
on how ExitSentry can improve the  
reliability of your airport security.

## How ExitSentry™ Works

## ExitSentry – The Undisputed Leader in Exit Lane Technology

- Over a million hours of proven performance
- Replaces costly around-the-clock guard coverage
- ROI can be within six months
- Patented field-configurable motion analysis software
- Provides early warning detection and event instant replay
- Digital recording and storage of alarm video with time/date stamp
- Network system integration for multiple exit lane monitoring
- Flying object detection
- Multi-media documentation and event logging
- Reliable computer equipment utilizes off-the-shelf components
- Easy to install and operate
- Interface to other systems and functions for remote alarm notification, intrusion containment, authorized remote bypass, etc.
- User-defined pre-alarm warning zone
- GSA Contract GS-07F-0448M, Schedule 084
